

Analyzing and Presenting Data with Power BI

Duration: 3 Days

US Price: \$1795

Delivery Options: Attend face-to-face in the classroom, [remote-live](#) or via [on-demand training](#).

Description

This course provides an in-depth introduction to Microsoft's Power BI suite of products. Students will learn to use the Power BI Desktop and Power BI online service to import, analyze, and visualize business data, and to share business intelligence. The course starts with an exploration of the evolution of relational databases, data warehouse and business intelligence. Later topics include importing and combining data from diverse data sources, shaping and transforming data, and modeling data. Students will develop useful and insightful data visualizations, and create and share reports and dashboards in the Power BI service. Students will learn about collaborating in the Power BI service, and will also gain an introduction to Data Analysis Expressions (DAX).

Students wanting in-depth coverage of DAX and Power Query M in addition to Power BI training should instead attend the [Analyzing Data with Power BI, DAX, and Power Query M](#) course rather than this course.

Prerequisites

Before attending this course, students must have:

- High degree of computer literacy
- Experience with office applications
- Familiarity with spreadsheet functionality
- An understating of fundamental business analysis issues such as revenue, profitability, financial accounting, and reporting
- Basic familiarity with relational databases and data warehousing is helpful but not required
