Planning and Administering SharePoint 2016 (20339-1A)

Duration: 5 Days

US Price: $895

Delivery Option: Attend via MOC On-Demand

Description

This is a Microsoft Official Course (MOC) and includes Microsoft courseware and hands-on labs. This course will provide you with the knowledge and skills to plan and administer a Microsoft SharePoint 2016 environment. The course teaches you how to deploy, administer, and troubleshoot your SharePoint environment. This course also provides guidelines, best practices, and considerations that help you optimize your SharePoint deployment.

The course is targeted at experienced IT professionals who are interested in learning how to install, configure, deploy, and manage SharePoint 2016 installations either in a data center or in the cloud. Students typically have more than one year of hands-on experience with planning and maintaining SharePoint and two years' experience with other core technologies on which SharePoint depends, including Windows Server 2012 R2 or later, Internet Information Services (IIS), Microsoft SQL Server 2014 or later, Active Directory Domain Services (AD DS), and networking infrastructure services.

Prerequisites

Before attending this course, students must have:

- Software management in a Windows Server 2012 or Windows Server 2012 R2 enterprise server environment
- Deploying and managing applications natively, virtually, and in the cloud
- Administering IIS
- Configuring AD DS for use in authentication, authorization, and as a user store
- Managing an application remotely by using Windows PowerShell 4.0
- Managing databases and server roles in SQL Server
- Connecting applications to SQL Server
- Implementing claims-based security
- Using Microsoft Hyper-V virtual machines

An ideal candidate for this course must have at least one year of experience with deploying and administering multiple SharePoint 2013 farms across a large enterprise. Because many customers have not upgraded from SharePoint 2010, a candidate can also have at least two years of experience with SharePoint 2010. However, they also must understand the differences between SharePoint 2010 and SharePoint 2013, particularly in terms of hybridization.

About MOC On-Demand

Microsoft Official Courses On-Demand (MOC On-Demand) uses a combination of streaming video, text, lab exercises and assessment checks throughout the course. MOC On-Demand courses are available for 90 days and recommend the following system requirements:

- Browser: Current version of Internet Explorer, Microsoft Edge, Google Chrome or Firefox
- Internet: Broadband Internet connection of over 4Mbps
- Screen Resolution: 1280 x 1024 or higher

Course Overview

Module 1: Introducing SharePoint 2016

This module describes the structure and capabilities of a SharePoint environment, and the major changes for IT professionals in SharePoint 2016. This module also describes the options available for deploying SharePoint 2016.

Lessons

- Key components of a SharePoint deployment
- New features in SharePoint 2016
- SharePoint 2016 deployment options

After completing this module, students will be able to:

- Identify the architecture and capabilities of SharePoint 2016
- Identify new and deprecated features in SharePoint 2016
- Identify deployment options for SharePoint 2016

Module 2: Designing an Information Architecture

This module describes how to gather business requirements, and the key elements of a

successful information architecture project. This module also explains how to structure information within a SharePoint 2016 deployment and make it easy to find and retrieve.

Lessons

- Identifying business requirements
- Understanding business requirements
- Organizing information in SharePoint 2016
- Planning for discoverability

Labs

- Identifying site columns and content types
- Designing a business taxonomy

After completing this module, students will be able to:

- Explain how understanding business requirements drives the design of an organizational information architecture
- Describe the key components available in SharePoint 2016 to deploy an information architecture
- Plan for discoverability as part of an information architecture deployment

---

Module 3: Designing a Logical Architecture

This module explains how to approach a logical architecture design and how to document it.

Lessons

- Overview of the SharePoint 2016 logical architecture
- Documenting your logical architecture

Labs

- Planning a logical architecture
- Producing a logical architecture diagram

After completing this module, students will be able to:

- Map business requirements to SharePoint 2016 architecture components
- Explain the importance of documentation and describe the options for documenting the logical architecture

---

Module 4: Designing a Physical Architecture

This module describes the physical design requirements for SharePoint 2016, and the physical components necessary to fulfill the physical architecture design. It also explains the SharePoint farm topologies, and describes how to map a logical architecture design to a physical architecture design.

Lessons

- Designing physical components for SharePoint deployments
- Designing supporting components for SharePoint deployments
- SharePoint farm topologies
- Mapping a logical architecture design to a physical architecture design

Labs

- Designing a physical architecture
- Developing a physical architecture design diagram

After completing this module, students will be able to:

- Describe the requirements for the physical components that are needed for a SharePoint 2016 deployment
- Describe the requirements for the supporting components that are needed for a successful SharePoint 2016 deployment
- Identify SharePoint farm topologies
- Map a logical architecture design to a physical architecture design

Module 5: Installing and Configuring SharePoint 2016

This module explains how to install SharePoint 2016 in different topologies, script the installation, and configure a SharePoint 2016 environment. This module also explains how to configure the core farm-level settings in a SharePoint 2016 deployment.

Lessons

- Installing SharePoint 2016
- Scripting installation and configuration of SharePoint
- Configuring SharePoint 2016 farm settings

Labs

- Provisioning a SharePoint 2016 farm
- Configuring incoming email
- Configuring outgoing email
- Configuring integration with Office Online Server

After completing this module, students will be able to:

- Install SharePoint 2016

Deploy and configure SharePoint 2016
- Script the installation and configuration of SharePoint 2016
- Configure SharePoint 2016 farm settings

Module 6: Creating Web Applications and Site Collections

This module explains how to create web applications in SharePoint 2016 and how to configure these applications. It also explains how to create and configure site collections in SharePoint 2016 and SharePoint Online.

Lessons

- Creating web applications
- Configuring web applications
- Creating and configuring site collections

Labs

- Creating a web application
- Configuring a web application
- Creating and configuring site collections
- Creating a site collection in a new content database
- Using Fast Site Collection Creation

After completing this module, students will be able to:

- Create web applications
- Configure web applications
- Create and configure site collections

Module 7: Planning and Configuring Service Applications

This module describes the service application architecture in SharePoint 2016, and how to provision and manage service applications.

Lessons

- Introduction to the service application architecture
- Creating and configuring service applications

Labs

- Provisioning a Managed Metadata Service application with Central Administration
- Provisioning a Managed Metadata Service application with Windows PowerShell
- Configuring the Word Automation Services service application for document conversion

- Configuring service application proxy groups

- Explain the key components and topologies for a SharePoint 2016 service application architecture
- Plan for service accounts and service application dependencies
- Understand the purpose of mapping service applications to business requirements
- Describe how to provision and manage SharePoint 2016 service applications

Module 8: Managing Users and Permissions and Securing Content

This module explains how to configure authorization in SharePoint 2016. It also explains how to configure site collection security in SharePoint 2016.

Lessons

- Configuring authorization in SharePoint 2016
- Managing access to content

Labs

- Creating a web-application policy
- Creating and managing SharePoint groups
- Creating custom permission levels
- Managing permissions and inheritance
- Managing site-collection security
- Enabling anonymous access to a site

After completing this module, students will be able to:

- Manage users and permissions in SharePoint 2016
- Manage access to content in SharePoint 2016

Module 9: Configuring Authentication for SharePoint 2016

This module explains about the SharePoint 2016 authentication infrastructure, and how to configure claims, providers, and identity federation for SharePoint 2016. It also explains how to configure server-to-server authentication for SharePoint 2016.

Lessons

- Overview of authentication
- Configuring federated authentication

- Configuring server-to-server authentication

Labs

- Configuring Microsoft SharePoint 2016 to use federated identities
- Configuring Active Directory Federation Services (AD FS) to enable a web application a relying party
- Configuring SharePoint to trust AD FS as an identity provider
- Configuring a web application to use the AD FS identity provider

After completing this module, students will be able to:

- Explain the authentication infrastructure of SharePoint 2016
- Configure claims providers and identity federation for SharePoint 2016
- Configure server-to-server authentication for SharePoint 2016

Module 10: Securing a SharePoint 2016 Deployment

This module explains how to secure a SharePoint 2016 deployment at the platform level, and how to configure farm-level security settings for a SharePoint 2016 deployment.

Lessons

- Securing the platform
- Configuring farm-level security

Labs

- Configuring SharePoint Server communication security
- Hardening a SharePoint server farm
- Configuring blocked file types
- Configuring Web Part security
- Implementing security auditing

After completing this module, students will be able to:

- Secure a SharePoint 2016 deployment at the platform level
- Configure farm-level security settings for a SharePoint 2016 deployment

Module 11: Managing Taxonomy

This module explains how to create and manage content types and content-type propagation. Additionally, it explains how to implement managed metadata in SharePoint web applications and site collections. It also explains how to configure the managed metadata service application in SharePoint 2016.

Lessons

- Managing content types
- Understanding managed metadata
- Configuring the managed metadata service

Labs

- Creating content types for propagation
- Publishing content types across site collections
- Configuring the managed metadata service
- Creating term sets and terms
- Consuming term sets

After completing this module, students will be able to:

- Create and manage content types and content-type propagation
- Explain how to implement managed metadata in SharePoint web applications and site collections
- Configure the managed metadata service application in SharePoint 2016

Module 12: Configuring User Profiles

This module explains how to configure the User Profile service application, and how to manage user profiles and audiences.

Lessons

- Configuring the User Profile Service Application
- Managing user profiles and audiences

Labs

- Configuring the User Profile Service Application
- Configuring directory import and synchronization
- Configuring My Sites
- Configuring audiences

After completing this module, students will be able to:

- Configure the User Profile service application
- Manage user profiles and audiences

Module 13: Configuring Enterprise Search

This module describes the Search Service Application and explains how to configure the Search service in SharePoint 2016. It also explains how to manage the search experience in SharePoint 2016.

Lessons

- Understanding the Search Service Application architecture
- Configuring Enterprise Search
- Managing Enterprise Search

Labs

- Configuring the Search Service Application
- Configuring a file share content source
- Configuring a local SharePoint content source
- Creating a search center
- Configuring a result source and a query rule
- Customizing the search experience
- Creating and deploying a thesaurus
- Configuring entity extractors and refiners
- Managing query spelling correction

After completing this module, students will be able to:

- Describe the Search service architecture in SharePoint 2016
- Configure the Search service in SharePoint 2016
- Manage the search experience in SharePoint 2016

Module 14: Monitoring and Maintaining a SharePoint 2016 Environment

This module explains how to implement a monitoring plan for SharePoint 2016, and how to optimize the performance of a SharePoint 2016 deployment. It also explains how to plan for and configure SharePoint caching. Further, it explains how to identify and resolve problems in a SharePoint 2016 environment.

Lessons

- Monitoring a SharePoint 2016 environment
- Tuning and optimizing a SharePoint 2016 environment
- Planning and configuring caching
- Troubleshooting a SharePoint 2016 environment

Labs

- Configuring usage and health data collection
- Configuring Sharepoint diagnostic logging
- Configuring Health Analyzer rules

- Reviewing usage and health data
- Analyzing network traffic
- Analyzing SharePoint page performance

After completing this module, students will be able to:

- Develop and implement a monitoring plan for a SharePoint 2016 environment
- Tune and optimize a SharePoint 2016 server farm on an ongoing basis
- Plan and configure caching to improve the performance of a SharePoint 2016 deployment
- Troubleshoot errors and other issues in a SharePoint 2016 deployment
